

Introduction

Welcome to Nectar

Nectar is your ready-to-go mobile web app kit which gives you complete peace of mind while developing mobile web apps.

It offers you a complete package of elements, components, screens and tools needed to build a mobile web app.

Features

Based on Framework7 — Nectar is built on the top of Framework7 — a fully-featured HTML mobile framework to develop apps with native Android & iOS look and feel.

Platform-agnostic UI/UX — Provide your users the best experience on Android and iOS using Google's Material Design and Apple's Cupertino Design respectively.

Multiple Navigation Patterns — Nectar comes with two navigation patterns most commonly used in mobile apps — Hamburger and Tab Bar.

Internationalization & RTL Support — Build your app for users around the world by localizing your user interface in various languages.

Progressive Web App Ready — Add functionalities such as offline working, push notifications to your mobile web app with the help of service workers and provide your users the best of both worlds — the web and the app.

Hybrid App Ready — Turn your mobile web app into native mobile app for Android or iOS using Apache Cordova or Adobe PhoneGap.
